

GSA Capabilities

Capability Statement

CISS is based in Allentown, Pennsylvania. We have developed our flagship product, Inventory Pro, with the goal of providing companies of all sizes with a flexible, scalable, easy to use, and easy to afford inventory management tool. Inventory Pro is continually evolving and transforming to utilize new technology and provide our customers with the tools needed to meet ever-changing supply chain management challenges.

Core Competencies

Our Products have been under development since 1994, and since CISS has become specialized in Inventory Management Software. CISS initially specialized in custom solutions and then developed enough of a base product to release a generic solution. The first release of Inventory Pro for Windows occurred in 1998, Later followed by Inventory Pro Online (IPOL). For those customers for whom our software is not a perfect fit we have also offered customized solutions, From accounting software integration to custom reports.

In a perfect world - our application would work for everyone "out of the box". For those that are not "perfect fits", we will build upon our standard products developing components to fit your businesses workflow. If you have the skills in-house; Inventory Pro for Windows uses the standard Add-In manager supplied with Microsoft Office, and you can create your own customizations to the system. The standard system allows for you to have different workstation "profiles" for different users and rename fields to something more appropriate for your environment. There are also some 'extra' generic fields in the standard product that can be used at your discretion.

Past Performance

US Navy Recruiting Command (NRC)
Office of Personnel Management (OPM)
USAF Maxwell
LA National Guard
